# Objectives

The aim of this conference is to bring together a diverse group of participants, such as prominent researchers, innovative scientists, academicians, corporate executives and postgraduate students

This conference will allow for a lively exchange of ideas and promote cooperation between professionals and researchers working to enhance the equitable use of plant resources for sustainable development

The conference's agenda covers a wide range of themes, covering food and nutrition security in the context of climate change, deliberate novel research initiatives in various plant species from different climatic conditions, and the use of plant products for a healthy globe

The enlightening sessions will engage participants in plant research, its translation, and product development. Future food security in the era of climate change holds promise with the additional topics of climate-resilient crops

In addition, there will also be special sessions on Phytomedicine, Nutrition, and Diet. Along with highlighting the incorporation of phytochemicals into modern healthcare, the event will also highlight the significance of natural medicine in treating chronic disorders

Insightful presentations, such as keynote addresses, plenary sessions, and interactive discussions, will be offered to participants. These talks will give a thorough overview of the different perspectives of plant resources by showcasing state-of-the-art research, creative remedies, and real-world case studies
